GRIFFIN ROAD
Proposed Street Section

Proposed Condition - Griffin Road

Griffin Road suffers from the same design flaws as SR 7. Low buildings are set far back from the street edge and lack sense of enclosure or place. Existing sidewalks are unprotected and are placed right next to the street.

As a six-lane road, Griffin Road will require three to five story buildings pulled up to the street to feel good as a street. The final design should include wide sidewalks, street trees, brick medians with street trees, and pedestrian scaled lighting.
